

Lab - JavaScript Review

Task: Create a todo list app using plain JavaScript

To-do list

- task1
- task2
- task3
- new task

- The app should be created with plain JavaScript, not Vue.js
- Add new task:
 - Add a input field and 'add task' button;
 - When user types in a new task and click the 'add task' button, the new task is added to the todo list
- All the tasks should be stored in a JavaScript array:
 - There should be three tasks in the array when the app starts;
 - Add new task is added to the end of the array.
